band centreline $Y_L(T)$
the lens: hotter AND richer
$T > T^*$, $Y > Y^*$
0.87% of volume
37% of consumption
hot and lean: burnt out, no reaction
Y_{H_2} [$\times 10^{-3}$]
temperature [K]
consumption density $\langle -\dot{\omega}_{H_2} \rangle$ [kg m^{-3} s^{-1}]
